

EPHEMERIS

OR, A

DIARY

{ ASTRONOMICAL,
ASTROLOGICAL,
METEOROLOGICAL, }

For the Year of our Lord, 1706.

Containing,

The Planets Motions and Aspects, Eclipses, Sun's Rising and Setting, Day-break, Twilight, Planetary-Hour by Day and Night, &c. Astrological Observations on the Twelve Months, and the Four Quarters of the Year: Also the Moon's Rising and Setting throughout the Year; with some other Things of use.

By JOB GADBURT.

Student in Physick and Astrologie.

Multi Multa sciunt, sed Nemo Omnia.

LONDON.

Printed by T. W. for the Company of STATIONERS.
1706.

EpheMERIDES

TO THE READER.

Courteous Reader,

THE great Apostle of the *Gentiles* tells us, *That it is appointed unto Men once to dye*: And indeed daily Experience teaches us, (that it is a most certain Truth) that whosoever hath a Birth, presently passeth and hasteth away towards Death. *Your Fathers where are they? And the Prophets do they live for ever?* No, for every thing that hath a beginning doth consequently and unavoidably rowl towards its end: So that we may see that Death is the Portion of every Man and Thing that hath Life.

And so it hath pleased the Divine Goodness to remove by Death my Couzen, Mr. *John Gadbury*, out of this World into Eternity, who had been your Monitor for about Fifty Years; and not willing that his Name should dye, I am free to become your Remembrancer for him; and therefore I have Methodiz'd the Work according to his former manner of Writing. I have given you my Astrological Conjectures on the Twelve Months, and also on the Four Quarters of the Year, and on the great Eclipse of the *Sun*, which happeneth on *May-day* this Year. I shall endeavour to be serviceable to my Native Country, and accordingly I have taken the Pains to Calculate the *Moon's* Rising and Setting for the whole Year, which is a thing of general use to all Persons both in City and Country, so that they may know when they shall have her blessed Light to supply them in their Nocturnal Perambulations.

Die ♂ *July 10. 1705.*

Your Servant,

JOH GADBURY

**A Table of *KINGS* and *QUEENS* of *England*,
from King *ÆGBERT* to our Sovereign Lady Queen *ANNE*.**

January hath XXXI Days.

Albin great *Jove*, and make my humble Pen
A welcome Nuncio to all kinds of Men;
May it Heavens Curtain draw, and here declare
The various Actions of the following Year.
How th' Stars affected are to love or hate,
To Nations, Cities, and each Mortal's Fate.

Pray God bless the Kingdom of England and the Rulers thereof, in their various Councils and Debates, that it may tend to the Good of the Nation Honour and Success to our most Gracious Sovereign thereof, then we need not fear the Plots and Contrivances of male-contented persons. This Year begins with an Opposition of the Sun and Jupiter; *Haly saith, De judiciis Alterum significat multa placita & iniustitias & manifesta delicta*; many Statutes made, and many Injustices and evident Offences committed. We may expect to hear of some Complaints, and 'tis very probable that some eminent person or persons will be accused of some Crimes for which Justice over-takes them; perhaps some of the long Robe. God in mercy divert the cross Influence of the Planets this Month from these Northern Countries. It portends great Divisions and Dissentions amongst great Men, Contradictions in their Councils and Debates, intemperate and hot-headed Resolutions. Great Complaints for want of Trade, and perhaps many are forced to turn Bankrupts against their will.

Our Gracious Sovereign Queen ANNE
 was born the 5th day of February, Anno
 1665.

Da spatium Vitæ, multos da Jupiter Annos.

A self-conceited Pride rules in every
 breast, and few men will easily forsake
 the conceits of their own brains. Many
 hot-headed persons make it their business
 to divide the most hopeful Councils now
 on foot; others endeavouring to foment
 differences amongst the vulgar people. It
 will be well if the opposition of ♀ and
 ♂ from ☉ and ♄ (they are Cardinal
 Signs) do not in or near these times cause
 strange Confusions in some Northern or
 North-East Countries, viz. Scotland and
 Holland, and make those people somewhat
 uneasie. Discords amongst persons of Emi-
 nency. Quarrels, Duels, Robberies on Land,
 and some Pyracies at Sea. The square of
 ♀ and ♀ shews some great Lady to la-
 bour under some Indisposition of Body:
 Threatens pregnant Women with hard la-
 bour. We may now in a little time ex-
 pect to hear of strange, sudden and unex-
 pected Actions in many Kingdoms and
 Countries of Europe. Many eminent Ho-
 nours are preparing for deserving Patriots.

March hath XXXI Days

All-seeing *Phœbus* having past the Line,
Meets his Ambassadour, and with him joins :
But Thundring *Jove* an angry Ray doth send
To Royal *Sol* before the Month doth end.

By square the two Maleficks disagree.

Let Foreign Parts ask what the Effects shall be.

On the 8th day of March, 1706, our Gracious Sovereign was Promulgated Queen of Great Britain, France and Ireland.

Happy are those worthy Senators that study the Welfare of the Republick; and thrice happy are those people that shall now study Peace and the Tranquility of the Nation. The beginning of the Month is attended with very considerable benevolent Aspects, which I hope may Influence not only Inclinations, but active Endeavours in divers worthy and eminent Persons of our Nation to Amity and Friendship. Good News to the Adventurous Merchants of some of their Ships coming home Richly Laden, and many likewise are going forth. God send them a prosperous Return.

Various News from beyond the Seas. Ambassadors arrive in and from several parts. The latter end of this Month is attended with some malefick Rays. God grant that the Spring be not injur'd thereby. ☉ ♀ significat quod erunt multe furta, latrones & prædones multi & manifesti. Cloudy, windy, rainy Weather in Easter-week; somewhat pleasanter at the end.

April hath XXX Days.

Illustrious *Sol* is in the *Ram* well seated;
 And thereby *Mars* and *Venus* is well greeted.
Venus to kiss her *Mars's* Hand can run:
 And he also is courted by the radiant *Sun*.
 If Heaven's Glorious Stars can thus agree,
 It's pity we don't live in Unity.

On the 23rd day of April, Anno 1702, our most Gracious Queen ANNA was magnificently Crowned Queen of England, Scotland, France and Ireland, &c. in Westminster-Abbey.

The Sextile of the Sun and Mars, and the Sextile of Mars and Venus, declares the Souldier active, and favours some eminent, valiant, and warlike Commander with great Success, whereby he increases in Honour, &c. The Month begins with great hopes of Unity in great Councils, or a better understanding than formerly: God continue it.

The Conjunction of Saturn and Mercury in Taurus, doth import some pernicious Contrivances in some Kingdom or Country. I wish there be no Plots and clandestine Conspiracies in Ireland, to disturb that Government; for ♄ is Ireland's Horoscope: But if there be, they will soon be discover'd, and perhaps pay dear enough for it.

France finds business enough to set herself in a posture of defence.

May hath XXXI Days.

Bright Sol Eclipsed on the First Day,
Foretells both Plague and Famine, Sages say.
Great Droughts, Seditions among mortal Men,
Being in *Taurus* a Terrestrial Sign.
Unwholesome Air, violent Storms at hand,
Rain, Hail, and Thunder, naught for Sea and Land.

Lunar Aspects.

Observations.

The first day of this Month the Glorious Lamp of Heaven the Sun will be Eclipsed from a little after 8 till something past 10 in the morning. *Astrologers* tell us, that if there happens an Eclipse of the Sun in the last decade of *Taurus*, that it signifies both Plague and Famine, a Mortality amongst all sorts of great Beasts, as Horses, Cows, Oxen, &c. and these things are most likely to befall some Countries that lyes North-East of us, as *Russia*, *Polemia*, *Swedelana*, and divers other Places that lye East and South-East. The Conjunction of *Saturn* and the Sun in *Taurus*, will cause much Melancholly in the Breasts of some great Persons; and procures great Trouble and Disturbance to divers Countries and People, and especially those whose Nativities concur therewith.

Some worthy Persons are smil'd on by their Superiors. *France* seems somewhat uneasy.

 Roman Account.

Lunar Aspects.

Observations.

Morbo odimus, sed accersimus.

In the last Lunation luxuriant *Venus* was in the Eighth House, *Domus Mortis*, in square to *Mars* in the Fifth, intimates sundry Distempers of a languishing Nature, which will end in the Grave, is now likely to afflict poor mortals; such as have been procured by Gluttony, lascivious and wanton courses.

For *Haly de Judiciis Astrorum*, Fol. 393, saith, *Significat multas Fornicationes, & magnam Cupiditatem inter Mulieres & Viros in secreto & contra Legem.* Besides, *Saturn* is in the Seventh, which doth not lessen the former Position; for hear what *Bevatius* saith, *Pars 4. cap. 76. Si vero fuerit in septima, & signum sit Jovianum, & ipse dominus Planeta Jovianus, significat malam civitatem Mulierum erga Viros, & earum inobedientiam.* From hence may be concluded that there will be much Fornications, Adulteries and Debaucheries, perpetrated amongst some Men and Women.

B

July hath XXXI Days.

Mars leaves the Ram, and into Taurus runs,
 To scourge poor Jupiter, Hermes, and the Sun.
 He loves to fish in troubled Waters, and inclines
 To Thefts, Murthers, Rapes, and such like Crimes :
 But that's not all, he aims at greater things ;
 For if he can he'll disturb the Courts of Kings.

The World seems to be full of Hurries and Distractions; for *Mercury* is not less than five times engaged with the other Planets, besides those of the *Moon*, which intimates some great Design and Contrivances now carried on in some European Countries. Many busie Brains are at work to do mischief. Much Knavery amongst the Dealers of the World. Many Lyes spread abroad, and several Frauds promoted.

God grant that we may have no Epidemical Distemper regnant amongst us; for *Mars* is come to the opposite place of the late Lunar Eclipse, irritating the Effects thereof in an infectious Air, a sickly season with sharp and violent Feavers. Diseases in the Fundament and secret parts, Fistulaes, Hemerhoids, Gonarhea's, &c. God preserve some great person of Europe from Surfeit or Feaver. ☐ ♀ significatq; vult multi rebelles interfectiones. Much Blood shed in divers Countries and many fall by the Sword. An eminent Clergy-man menaced near this time with great danger to his Health, if not Life.

August hath XXXI Days.

Now the Resplendent *Venus*, Queen of Love,
To her Superiours doth in Friendship move.
Stilbon's at home too, and hath *Mars* for's Friend,
And unto *Saturn*'s Council doth devoutly bend.
Saturn squares *Sol*, this lessens great Mens Peace,
The Air's disturb'd, their Discontents increase.

Observations.

Felix qui potuit rerum cognoscere Causas.

This Month begins as the last ends.
 * The Weather proves hot, and so doth
 the Actions of men; for ☐ of the ☉
 and ♂ creates strange Heat and Passions
 amongst the Grandes of Nations, whence
 arises a strong inclination to mutinie.
 and Inturrections in some Countreies.
 Some uneasie Spirits are endeavouring
 to disturb the Peace of *Ireland*: Let them
 take heed they do not meet with a just
 Reward. The ☐ of the ☉ and ♀ is
 not wanting to shew its Effects in dividing
 the Councils of those Nations and Courts
 of Princes, where they have Debates and
 Consults about publick Business. ♀ is in
 II, and ♂ will enter it before the month
 is ended; and II is a Humane Sign, and
 they meeting in conjunction, from hence
 we may conclude that we shall hear of
 some violent Actions (either in this month
 or the next) both by Land and Sea. Some
 stormy Weather at the end of this month
 or the beginning of the next. Pray God
 preserve our Shipping.

September hath XXX Days.

The two grand Rebels of the Glorious Sky,
Meets and conjoyns in *London's Gemini*.

May Heaven preserve us from the Influence,
And we be free from their malevolence.

Be what it will, we must not chusers be :
Wise men submit to God and Destiny.

The Conjunction of *Saturn* and *Mars* in *Gemini* corrupts the Air, and being in a Humane Sign, *significat multitudinem infirmitatum, &c.* signifies many Infirmities and Sickneses to invade the Bodies of Men and Women. I fear a very sickly time. *Mars* opposing the Vernal Horoscope aggravates the Sickness of the season; he raiseth the bilious Humour in Men, and occasions Strifes, Animosities and Contentions, and many revengeful Actions, &c.

God preserve the Honourable City of *London* from unhappy sudden Fires, and all other Harms that she seems to be threatened with, as badness of Trade, &c. The many benevolent Aspects that is in this Month, may I hope mitigate the evil Effects of the Conjunction of the two malevolents now operating. God grant that the Kingdoms of *Great Britain* and *Ireland*, with the sacred Ruler of them, may be ever happy; and let the Bolts of Heaven's Anger fall upon their implacable Enemies,

B. 4

October hath XXXI Days.

I w. maiencks backward go, and Cynthia fair

E. ip'ed is, in Royal Phœbia's Chair.

Old Chronus here opposes Venus fair,

And Mars against her too proclaimeth War.

Hence follow Sorrows, Grief to the fair Sex,

And some great Lady conquer'd is by Death.

Observations.

Pax est dulcissima rerum.

The World seems a little calm at present after abundance of Confusion and Troubles. The Soldiers begin to retire to their Winter Quarters. Hostility seemeth to cease for a time with Nations that are at Wars. Ambassadors are sent from one Court to another to concert matters. ♀ in ♈ in * to the ☉ intimates a happy change in the Affairs of some Persons. Some deserving Persons both in Church and State are preferred to Honour and Dignity. Some good Laws made, or revived rather, for the advancement of the Common Interest.

Much welcome News seems to come us from divers parts, and the Merchants rejoyce at the Arrival of many Ships, &c. richly laden.

The Opposition of Saturn and Venus and the Opposition of Mars and Venus afflicts many seeming Women with hard Labour and Travel, and many of them go to their long home.

November hath XXX Days.

Saturn and *Mavors* both confront the Sun;
Some lofty Cedars bow, some small ones run.
Some worthy Hero discompos'd by Grief,
Trives all Endeavours, yet finds no Relief.

Such is *Maw's* Fate, true Bliss he scarce can know,
But Clouds soon rise to work his over-throw.

Here is little hopes of bringing matters and things of difference into an orderly compofure ; for the configurations of this Month are many, and of different qualities, therefore the effects depending will be as various. *Jupiter* in square to the *Sun*, and *Saturn* in opposition to the *Sun*, and *Mars* in opposition to him also. The Effects of these Configurations, with some others, are close and subtle Councils, many needless Debates and Consultations, and they go on but confusedly, neither have they that effect they design ; whence little or nothing of Good to the Publick may be expected. Many great things are in agitation, and under serious Consideration. *Tempus revelat omnia.*

The square of the two Superiours which falls in the beginning of *Gemini* and *ay*, is of no mean signification ; besides there is two more of their ☐'s falls next Year. The Conjunction of the two Infortunes, signifies there will be many Falfities, Frauds and Deceits put in practice amongst men, one man shall seek to in-
 inare and intrap another.

English Account.

May we like Christians live, our Lives amend,
And not like Brutes each other tear and rend.

Observations.

Finis coronat Opus.

The Year draws towards an end ; I wish that all Murmurings, Repinings and Discontents among Men might do so too. The Configurations of this Month are few, and those that be are benevolent ; and therefore we may rationally hope for much Unity both in Councils of Nations, as well as amongst the People in general, if the male Influence of the last Month doth not prevent.

God bless our Gracious Sovereign, and Her Honourable Council, with the August Assembly of Parliament, and give them Unity among themselves, and a Spirit to discern what belongs to the Peace of our disturbed Nation, that they may provide Remedies before it be too late.

Deum timere, Regem honorare.

ASTROLOGICAL CONJECTURES

For the Year 1706.

By JOB GADBURY.

IN my Judgments Astrological on this Year I shall consider the method following.

I. I shall give you my Astrological conjectures of the four Quarters of the Year.

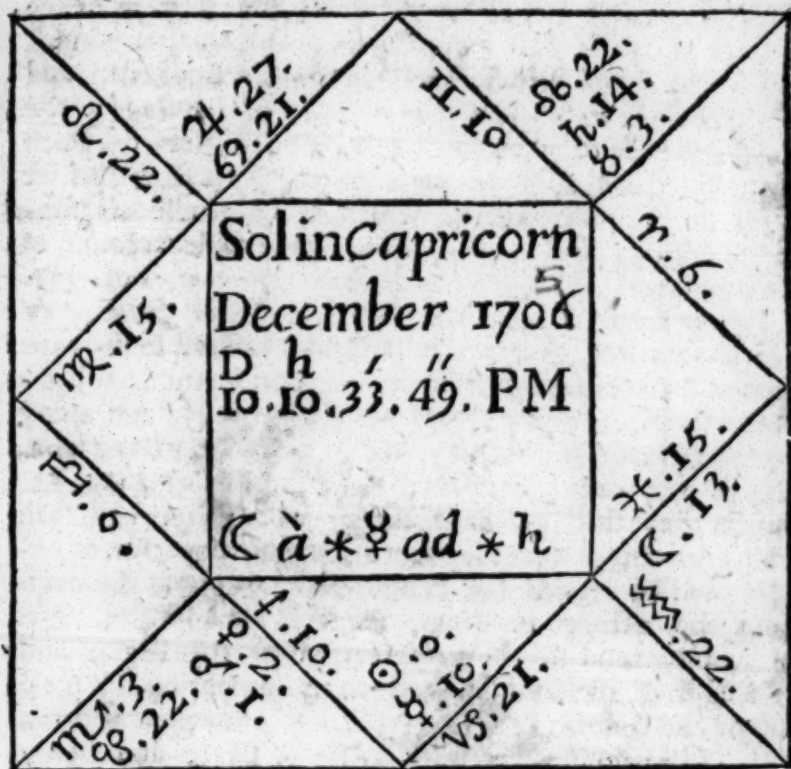

II Something touching the Eclipses that shall happen this Year.

I. Of the Brumal Quarter:

I shall begin with the Brumal or Winter Quarter, because the greatest part of this Quarter is within the limits of this Year 1706. Besides some Astrologers affirm the Year to commence when the Sun enters *Capricorn*, that Sign being the Conception, tho' *Aries* be the Birth of Vegetables. The Figure of the Brumal quarter follows.

The

Astrological Conjectures for the Year 1706:

The Winter Quarter always begins where the *Autumnal* Season ends, and *Astronomically* commenceth when the Sun salutes the first scruple of *Capricorn*, then this melancholly, dark, obscure, and uncomfortable Season begins on the 10th Day of *December* 1705, 10 hours 33 min. 49 sec. *Post Meridiem*. This melancholly Quarter continueth all that quantity of time, which the Sun is transiting through the signs *VS*, ♄ and ♄ which is part of *December*, all *January*, *February*, and part of *March*. The Rulers of this Quarter are *Saturn* and *Jupiter*, but *Saturn* hath a double power to that of *Jupiter*, because *Capricorn* and *Aquarius* both are his Signs or mansion Houses. And now all things look with a sad and unpleasant face, and may be seen to wear the Image of death and destruction. Frost, Snow, Hail, black Clouds now appear, Barrenness extremity of cold, and all things that are negative to delight and pleasure have now their Regency. C 2 In

4. *Astrological Conjectures for the Year 1706.*

In this our Solstitial figure, we find the Planets in Amicable rays one with another, viz. ♃ in △ to ♂ and Saturn in △ to ♀ and ♄ in ✕ to ♄ and ♀ from hence we may conclude, that a great part of this Quarter is most likely to be spent in sober and deliberate Councils, and most Judicious contrivances made use of tending to the regulations of some differences and disorders that too much appear in these *Europian* parts of the World. Also we find ♃ in the 11th House, which is the House of hope and friendship; and Authors give us a notable account of such a position. Hear *Haly de Judiciis Astorum*, Fol. 371. *Si Jupiter fuerit in undecima, multiplicabuntur fortune, & habebunt bonas res, &c.* when ♃ shall be posited in the 11th House of a Revolution, Men shall have good fortune multiplied unto them, and live freely and prosperously, and enjoy Peace and Plenty, &c. Nay my Author goes further and saith, although they despair'd of such blessings, yet during that Revolution they shall be made happy with them, and shall obtain such things that they can reasonably hope for or expect: and to render the People more happy, the cogitations and actions of Kings, Princes, Magistrates, &c. will wholly tend to the preservation of the Rights and Privileges of the People, and to the procuring of their Content and Quiet. Probably from this benovolent position of ♃, some honourable Act or Acts of Grace and Mercy may be obtained of her Sacred Majesty and Parliament for the satisfying unquiet Minds, and quelling disorders and divisions, that now too much abound in the State. ♄ in the 9th Angle threatens dangers in Journies and Shipwrecks at Sea, which is most likely to happen in *January* and *February*, and so I pass on to the Spring Quarter.

The Spring is a time never unwelcome nor unwished for, for the Weather begins to appear like a pitiful and truly kind-hearted cherisher, and Dame *Vesta* opens her Paradise of Pleasures to all her Children, thereby exercising both their Souls and Senses.

This Vernal Season continueth all the time that the Sun is passing through the first three Northern Signs, viz. ♈, ♉, ♊. At his entrance into ♈ he makes the Days and Nights of equal length (except within the Polar Circles) all the World over, and then leaving the Inhabitants of the
Southern

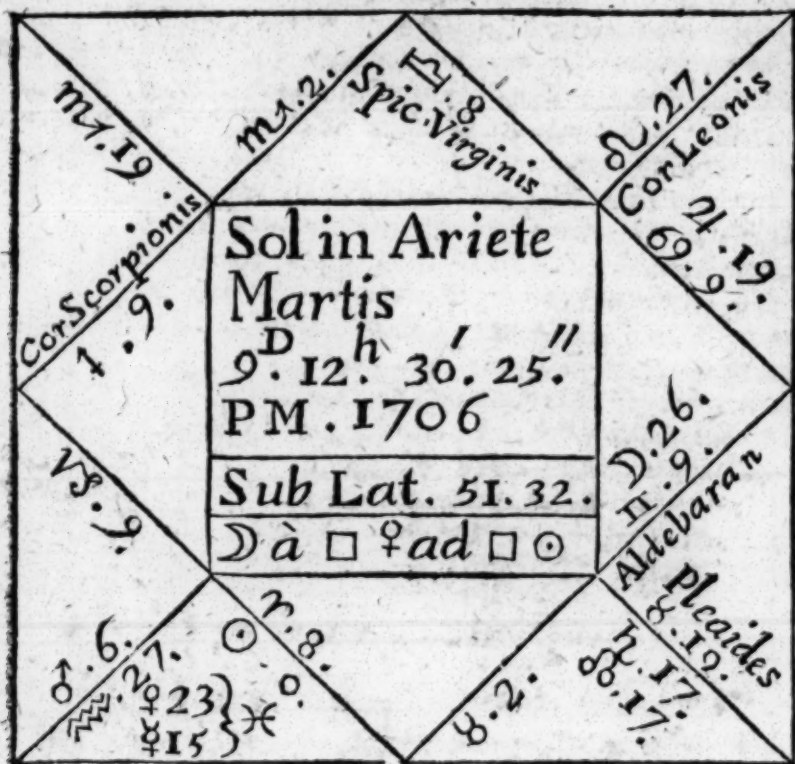

Astrological Conjectures for the Year 1706.

5

Southern parts of the World, doth begin to refresh and revive, with his cherishing Beams, all those that inhabit in these Northern parts. Now all Vegetables put forth their Leaves and Blossoms, and Nature shews a Spring-like face, for Natures Limbers now are at work depicting to the World a Million of pleasant varieties. But I pass these things and come to present you with the Calculation of the Suns Ingrefs into γ from the Caroline Tables.

The Vernal Scheme.

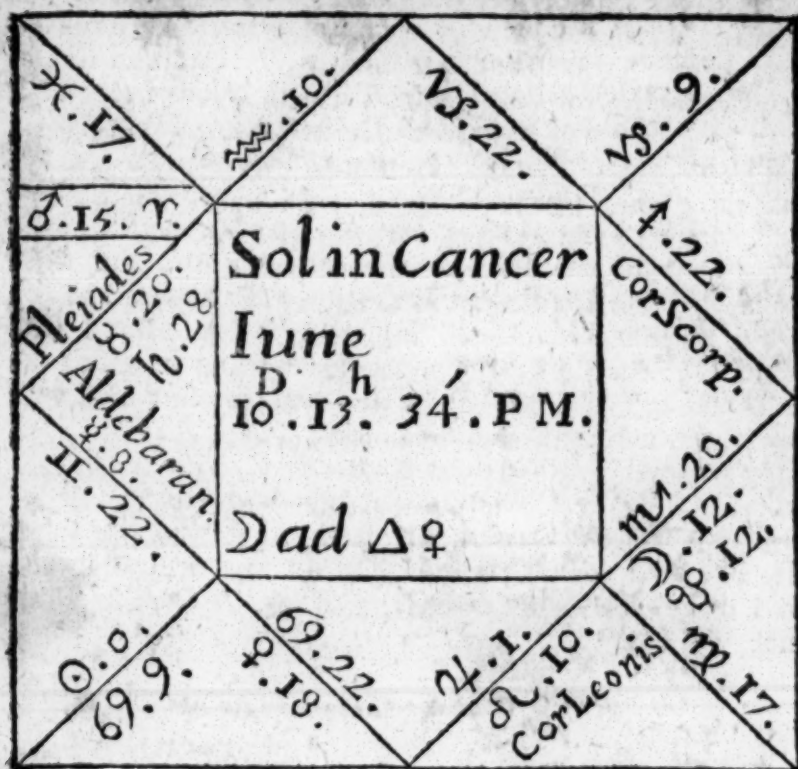

In this Vernal Scheme we have ♄ ascending, and ♀ Lord thereof in ☉ his Exaltation, but in *Domo Martis*, and he in ♄ to ♀ and ♀ in the third, and in ♄ to ♀ in the sixth. This is a pretty moderate good position of the Heavens, and one would think it should promise a quiet, pleasant Season in the general, and no great fears of hostility performed in this Quarter. ♀ Lady of the tenth House, and in Trine to ♄ Lord of the Ascendant, denotes a seeming better understanding between Princes and their Subjects than formerly, or that the common People are more subjected to the Laws of their Princes, than in times past. Yet notwithstanding the smiles of this our Vernal Figure, we find the ☉ posited in the seventh Angle, the Angle of contention and strife, and there separating from a Square of ♀ and applying to a Square of the ☉ Lord

Lord of the 9th House; this shews some uneasiness in the People, either about Religion or Property: This will go near to give Trouble and Afflictions to the common sort of People, with great oppressions in divers Countries, which is to be feared will have an unhappy conclusion. *Messabala* saith that the ☿ signifies the common People in general, and the ☽ doth signifie Kings and Governors, and here we find them in Square one to the other, which may stimulate some commotions between the common sort and their Rulers in some Countries and Kingdoms of *Europe*, and also cause Tumults, Mutinies, and Insurrections. But I well hope that the Lord of the Ascendent being in △ to the Lady of the Mid-heaven, will in a great measure moderate many of these disorders, and make them appear much less than what we may suppose. *Bonatus* saith, *Pars 4. Cap. 76. Saturnus si fuerit in sexta—— infirmitates plures, & nocumentum minorum animalium.* ♄ in the sixth House signifies many infirmities and damage of the smaller Beasts; and so I come to consider something of the *Æstival* or Summer Quarter.

Of the Æstival or Summer Season.

The Summer begins where the Spring ends, viz. at that point of time when the Royal Lamp of Heaven entreth the first Scruple of ☊, which this Year happens on the 10th Day of *June*, 13 hours 34 min. P. M. or vulgarly the 11th of *June*, 34 min. past One in the Morning. This Quarter by the *Latins* is called *Æstas*, because this Season derives the name *ab æstu*, which signifies, burning of the Sun, great heat; and so also doth the *English* word Summer express it. For Summer is a word taken from the *German* Language; and in the *German* Tongue it is said to be *Sunmehr*, that is more Sun than at other times. This Quarter may well be called the Mother of Plenty, and Daughter of bounty. For the Earth hath now her lap full of every kind of Grain, she is pregnant and ready to be delivered, that she might thereby enrich the weary Labourer, and feed each hungry Soul.

The Heavens doth behold the Earth with this Face, at the time of this Solstitial Ingress, in which we may observe h Lord of the 9th, 10th and 11th Angles in ♄ in the Ascendant, the ♄ in the 6th in ♄ , applying to a trine of ♀ , ♄ in ♄ in the 4th, and ♀ in the fourth in ♄ ; the ♄ in the second, and ♀ in ♄ in the Ascendant separated from a ♄ of ♄ , ♄ in the 12th in ♄ in square to ♀ , and she upon the Cusp of the North Angle, this square of ♀ and ♄ may go near to make work for the Chirurgion, for many Persons will be subject to wander beyond their own limits to satisfy their Lusts, and very frequently change their pasture and make use of more then lawfully belongs unto them, such Persons I say by their libidinous courses will bring such Distempers upon them that they will not easily get rid of them.

In this our Festival Scheme we have the envious Planet ♄ most strong and powerful, and therefore to be esteemed the

the Lord of the Figure. Astrologers tell us that if H be so posited, he signifies a Death or Mortality amongst Men; great scarcity of the Fruits of the Earth and of all things useful for mankind. He afflicts Men with tedious and grievous Diseases. In the Winter Season, he produces much Frosts and Snow, great Rains, Tempests, &c. in Summer time much Thunder and Lightning, unseasonable Storms and Showers, doing harm to the Harvest and the Fruits thereof. He likewise presages Wars, Discords and Dissentions between Emperors, Princes, &c. and many troubles to happen in the Courts of Kings, and Nobles, and that one Great and Noble Man shall contend with another. He also stimulates Earthquakes, terrible Storms and Hurricanes, &c. in the Western parts of the World; and so I shall end my discourse of this Quarter and descend to the Autumnal Quarter.

The Autumnal or Harvest Quarter, this Season ever begins where the Summer ends, viz. when the $\odot$ toucheth the first point of ♎ , which happeneth on September the 12th Day 17 Minutes past 3 in the Afternoon this Year.

The Days and Nights are now again equal all the World over betwixt the Polar Circles. This Autumnal Quarter takes his name from the Verb *Autumno*, which signifies to make ripe, and indeed all things are so, for now the Barns are full, the Presses and Fats overflow with abundance of Wine and Oil, and all sorts of Fruits.

In this Figure we have ♄ Lord of the Horoscope, and ☿ Lord of the Mid-heaven in Conjunction in ♀ in the fifth House, and therefore the Principle signifiers in this Scheme. ♄ governs vs the Sign Horoscopical, and he in ☿ with ☿ signifies the commonalty, to be Enemies to their own advantage, and to detrement themselves by many head-strong precipitate actions, perverse and obstinate doings; and as they are placed in the fifth House, Men will be apt to pursue, and be delighted in Mirth and Reveling, and to follow voluptuousness, neglecting their more weighty and gainful affairs, to their after prejudice, bringing them to Sorrow and Repentance, when perhaps it will be too late: They afflict Men with noxious and grievous Diseases proceeding from heat and moisture, with a commixture of Aguish Humours; as Plague, Pestilence, Batches, Boils, Feavers, Surfeits, Small-Pox, Gourty and Scorbutical Humours; &c. *Haly* tells us, Fol. 391. *Si quando Mars junctus fuerit*

Astrological Conjectures for the Year 1706. II

fuert cum Saturno, struet quilibet alteri fraudes, & deceptiones; & erunt inter homines percussiones, &c. when $\odot$ and h shall be conjoined, there will be many falsities, frauds, couzenages, and deceits put in practice among Men, and one Man shall seek to intrap and ensnare another, and there will be much quarreling, fightings, wounds and blows among Men. The $\odot$ applying to the trine of h , and he posited in the 7th Angle, is of a happy import and tendency. Besides the $\odot$ and h behold the two maleficks with a trine Aspect, which I hope will in some measure soften or alleviate the severity of this malevolent Conjunction. But I pass to the second thing promised, which is,

II. Some things touching the Eclipses this Year.

Of Eclipses of the Sun and Moon, the Causes of them, how and when they happen.

I. What an Eclipse is? An Eclipse is a privation or want of light in an Opacous or dark Body, which at some times is beheld or aspected by a Luminous body; and therefore the *Greeks* call it *Eclipsis*, which signifies, a wanting, waining, failing or obscuring, or to lose light.

II. Of the cause and reason of the Sun's Eclipse.

An Eclipse of the $\odot$, is caused by the h , who is a dark body, being interposed or placed between the $\odot$ and our sight, for the h being a dark body passing between the $\odot$ and us, must needs during the time of this her passage hinder the light of the $\odot$ from us, either in whole or in part. And these Eclipses do never happen but at a new h , when the $\odot$ and h are in conjunction, that is in the same Sign and Degree of the Ecliptick; and such a conjunction there is every Month, yet not so as the $\odot$ to be Eclipsed: for the $\odot$ moveth always in the Ecliptick line, and the h hath latitude sometimes Northward, and sometimes Southward, to the quantity of about 5 degrees; for if the Moon did move always in the Ecliptick line, as the $\odot$ doth, there would be an Eclipse of the $\odot$ every new h , and by that means we should have 13 Eclipses of the $\odot$ in a Year: But these Eclipses only happen when the h hath little or no latitude, and when the conjunction is in or near one of the Nodes, and as often as

the Luminaries happen to be in conjunction within 16 or 17 degrees of the Head or Tail of the Dragon, which are the points where the ☾ crosseth the Ecliptick, there must be an Eclipse of the ☉, greater or lesser to some part of this earthly Globe, as you may perceive in *Kepler, Epitom. Astronomiæ fol. 880.* An Eclipse of the ☉ cannot be universal, as the Moons is, for the ☉ so far exceedeth the Earth, and the Earth the ☾ in bigness, that the cone of the Moons Shadow cannot shadow all the Earth at once, but in some part of the Earth there may be a Total, or Central Eclipse, in another part a small Eclipse, and in another part of the Earth no Eclipse at all, and that at the same Instant: which difference of appearance, dependeth upon the Moons Parallax, which differeth in every Climate; from hence it may be concluded that the ☉ loseth no light, but only we are deprived of it by the interposition of the Moons dark body; for indeed it is impossible for a Luminous body, (and such is the ☉, yea, *fons Lucis*, the fountain of Light) to suffer either a privation or obscuration.

III. Of the cause of the Moons Eclipse.

As the Eclipse of the ☉ was caused by the dark body of the ☾, between our sight and the ☉, so the Eclipse of the ☾ is caused by the Interposition of the body of the Earth between the ☉ and the ☾, when they are in opposition one to the other, so that the Philosopher rightly defines it, that it is *Privatio luminis in Luna orta à diametrali terræ inter Solem & Lunam oppositione.* Now you are to understand, that as the ☉ is not subject to an Eclipse every time he is in conjunction of the ☾; so the ☾ is not capable of suffering a defect or want of light every time she is in opposition of the ☉. But if you would know when the ☾ shall suffer an Eclipse, observe, so often as the ☉ (at the time of the full ☾) which she cannot be eclipsed at no other time but at a full ☾) is within 10 or 11 degrees of the Dragons ♀ or ♂ there must be an Eclipse of the ☾ (as you may see in *Kepler Epitom. Astronomiæ fol. 866.*) either greater or less according to the distance from the aforesaid points. Now of Eclipses

ses of the ☾ there are four varieties; for first the ☾ may be eclipsed and but part of her body darkned, and this is called a Partile Eclipse: Secondly the Moons body may be wholly darkned, and then it is called a Total Eclipse, of which there are two sorts; for first the ☾ may be totally eclipsed for a moment of time only, and then begin to recover her light again, and such an Eclipse is called total without continuance: and secondly, when the Moons body first becomes to be wholly darkned, it may continue some time in that total darkness, and such Eclipses are called total with continuance. Here is to be noted that contrary to Solar Eclipses, all Lunar Eclipses are visible to all the Inhabitants in the World, that have the ☾ above their Horizon at the time of the Eclipse.

Of the Eclipses this Year 1706,

Four times will the two great Luminaries of Heaven suffer an Eclipse this Year, and they follow in order thus.

The first is a Partile Eclipse of the ☾, happening near One in the Morning, on the 17th day of April.

The second is a great and visible Eclipse of the ☉ on the first day of May, between 8 and 10 in the Morning.

According to Mr. Wing's Calculation.

	h	'	"
The beginning of the Eclipse is —	8	9	41
The middle or greatest obscuration is —	9	16	34
The end or full recovery of Light is —	10	25	34

A Type of the Eclipse of the Sun.

The Third is a visible Eclipse of the ☿ on the 10th day of *October*, about 7 at Night, almost 8 digits Eclipsed.

The fourth is an Eclipse of the ☾ *October* 25th Day, near 3 in the Afternoon, but by reason of the Moons great South Latitude she will be depressed below the Suns Limb, for which reason it will not be visible here, but will be Conspicuous in the South and South-West Parts of the World.

A word or two of the effects of the Sun's Eclipse, which happeneth on May Day this Year 1706.

ASTROLOGERS tell us, That Eclipses of the ☉ are the forerunner of many and great incumbrances and mischiefs to befall the People and Places concern'd therein (of which Persons and Places under the Cœlestial ☿, must take care to avoid. Blessed be God, *England* is not directly concern'd therein.) and of strange and unexpected events, and alterations to ensue.

Cardan tells us, *Segment 5. Aphor. 45. Eclipses Luminarium super Civitates, Provincias & Regna, &c. The Eclipses*

Eclipses of the ☉ and ☾ pour down their influences upon Cities, Kingdoms and Provinces, more notably and remarkably, then upon Men of mean conditions, or yet upon Kings themselves; for they principally respect the multitude. This Eclipse begins in the 11th House and ends in the 10th. Eclipses of the ☉ in Angles do generally stir up Sedition, Tumults, Rebellions, &c. against Governours and Government. And at the time of this Eclipse the envious Planet ♄ is in the 11th House afflicting ♀ and both the Luminaries. Some great Queen, Princess, Empress, &c. yields to the Grave, making good that Scriptural expression, *I have said ye are Gods, but you shall die like Men.* And as ♄ is Lord of the 7th and 8th Angles, afflicting the ☉, ☾ and ♀, may (as I said before) signifie the Death of many Noble Persons of both Sexes. The Countries that are most likely to be Passive under the effects of this Eclipse, are *Russia, Polonia, Swedeland, Lorrain, Ireland, Campania, Helvetia, Bavaria,* and divers other Places. Also, those Persons who have 21 Degrees, or thereabouts of ☿ or ♀ on their Ascendents, or M. C. ☉ or ☾ will in some measure feel the effects thereof. I should have been more copious had I more room.

✍ Note, that through the Printers carelesness the first Sunday in February is misplac'd, for the Sunday letter *F* that stands against the second should be placed against the third Day.

ADVERTISEMENTS.

Mathematicks in Theory and Practice, are Taught, viz. Arithmetick, Vulgar and Decimal, Navigation, Surveying, Gauging, Dyalling, Measuring any sort of Works, &c. the use of the Globes, Maps and other Mathematical Instruments. Also Land Survey'd, Dyals made, Timber and Building measur'd; Maps or Draughts of Surveys drawn, &c. By *R. Baker* at the *Windmil* without *Temple-Bar*, and at the *Exchange* Coffee-House, over against the *Royal-Exchange*.

Ptolemy's *Quadripartite*; or four Books concerning the Influence of the Stars, faithfully render'd into *English* from *Leo Allatius*, Library-Keeper to the Vatican in *Rome*; and diligently compared with the best of other *Greek* Copies and *Latin* Translations. To which is added, variety of Notes and Annotations, explaining the most difficult and obscure passages in the whole Subject. And also an Appendix for the better understanding of *Ptolemy*, concerning the part of *Fortune*. By *John Whalley*, Student in *Astrology* and *Physick*. Sold by *John Sprint*, at the *Bell* in *Little-Britain*. Price 1 s. 6 d.

A Treatise of *Eclipses*: In which is shew'd, 1. What an Eclipse is, and how to know when an Eclipse shall happen. 2. The Errors of several Authors concerning the Longitude and the Astrological handling of Eclipses and Mundane Revolutions in General; and how the same may be Rectified and Amended. 3. The undoubted certainty of the *Ptolomeian* Astrology; and how thereby to judge of Eclipses, and the Revolutions of the Years of the World in general. 4. An Astrological Judgment on the great Eclipse of the Sun, the 13th of *September*, 1699: And another as great, which will happen the first of *May*, 1706. And on the Conjunction of *Saturn* and *Mars*, *December* 1700; and how far they are like to affect *England*, *Ireland*, *Scotland*, *Holland*, *France*, *Spain*, *Germany*, and several other parts of *Europe*. 5. How by the Rising, Setting and Colours of the Sun, Moon and other Stars, Comets and Meteors, to judge of the Weather, literally from *Ptolemy*, Translation excepted. The whole Subject is new, and full of variety, and never before by any so copiously handled as here it is. By *John Whalley*, Student in *Physick* and *Astrology*. Sold by *John Sprint*, at the *Bell* in *Little-Britain*. Price 6 d.
